# Strategies of translating

## culture-bound items in Gilmore Girls

Diplomski rad

Mentor (izv.prof.dr.sc. Marija Omazić)

#### Summary

The present paper looks closely at the link between language, translation and culture in view of two different approaches to translation studies. Completely excluding the cultural context from the theory and analysis of translation, scholars have for a long time considered translation to be solely a linguistic procedure, which involves a simple replacement of lexical and grammatical items between languages. The shift from this purely linguistic approach to translation studies, referred to as the cultural turn, can be seen in the inclusion of extra-linguistic factors in the process of translation. With the scope of translation studies being broadened to cover the cultural framework as well, translation is now viewed as the process of both linguistic and cultural adaptation. Since language forms an integral component of culture, linguistic items cannot be translated into target language without referring to the context of culture first. Even though cultures differ among themselves, they also have many points in common, which makes translation possible. Centering on the corpus of the English culture-bound items used in subtitles, this paper aims to prove that a cultural gap in Croatian can in practice always be bridged via corresponding translation strategy. Apart from the need to take into account all the factors determining the choice of the procedure, translator as a cultural mediator should also be bilingual and bicultural in order to successfully transfer source cultural references into target language.

**Key words**: culture-bound items, cultural turn, translation strategies, cross-cultural translation, screen translation

## Introduction

This paper consists of four parts. In Part one the concept of culture is defined from several aspects. Covering the approaches to the study of culture, the models of culture and the logical levels of culture, it tackles the problem of existence of various theories of this social phenomenon. Part two thoroughly examines the interrelation between language and culture. By discussing the contexts of situation and culture, the Sapir-Whorf Hypothesis and Hall's Theory of contexting, it proves that language and culture are inseparable in the process of translational communication. Part three gives an insight into a broad field of cross-cultural translation. Cultural turn, culture-bound items and cultural gaps as well as the strategies of translating culture-bound items from the television series *Gilmore Girls* and their Croatian equivalents. With the analysis of transference, naturalization, cultural equivalent, functional equivalent, descriptive equivalent, componential analysis, through-translation and shift, it is shown which of these strategies translator is more likely to use when transmitting English cultural specifics into Croatian.

#### **1. Defining culture**

Katan (1999: 16) claims that defining culture is important because the definition determines the way in which culture is perceived, studied and taught. Since many disciplines have dealt with the concept of culture and each has looked into it from a different perspective, there are consequently various definitions of it. Most of the definitions offered in those fields, however, relate more or less to the idea of culture as a shared mental model or map of the world.

One of the most quoted definitions of culture was formulated by the English anthropologist Edward Burnett Taylor in 1871 and it goes like this: "Culture is that complex wide which includes knowledge, belief, art, morals, law, customs and any other capabilities and habits acquired by man as a member of society" (Katan 1999: 16). A slightly different definition was suggested in 1984 by Hofstede, a social psychologist and anthropologist, who incorporates human, social and individual levels of culture and defines it as "not being a material phenomenon; it does not consist of things, people, behavior, or emotions. It is rather an organization of these things..." (House 2002: 94).

Gail Robinson, from the Center for Language and Cross-cultural Skills in San Francisco, goes a step further and groups various definitions of culture into external and internal level. The external level includes behaviors (language, gestures, customs) and products (literature, folklore, art, music, artefacts), whereas the internal level covers ideas (beliefs, values, institutions). Robinson then suggests that each of the definitions can be linked to a particular approach to the study of culture. The approaches are described in the next section.

## 1.1. Approaches to the study of culture

There are four approaches to the study of culture, each focusing on a different theory which aims to clarify the concept of culture. We distinguish between behaviorist, functionalist, cognitive, and dynamic approach.

Behaviorist approach emphasizes sets of behaviors as guidelines for determining typical features of one's culture. Being to a great extent ethnocentric, it argues for the belief in the superiority of the culture to which one belongs. Functionalist approach, on the other hand, goes beyond individual cultures and focuses on shared rules in an attempt to account for the behavior. It is ideologically based and limited to one culture's dominant or preferred values. A move away from the functionalist approach is clearly visible in the cognitive approach. It suggests that cultures model reality in different ways and stresses the form of things that people have in mind, their models of perceiving, relating and interpreting them as being vitally important for understanding how culture functions. Contrary to the approaches discussed so far which treat culture as a static phenomenon, dynamic approach perceives it as a dialectic process between internal models and external mechanisms. According to this approach, the meaning in culture is influenced by past meanings and it establishes precedent for future meanings.

The main problem with all the approaches is that none of them covers all aspects of culture. With the aim of uniting those approaches and giving a broader view of culture, social anthropologists suggested models of culture, which are discussed in detail in the following section.

## 1.2. Models of culture

Modeling as the method which simplifies how a system functions proves to be extremely useful when analyzing aspects of culture. Advocated by business consultants and cross-cultural skills trainers, the models of culture are surely effective in practice as well. The four models of culture are as follows: Trompenaars's Layers, Hofstede's Onion, the Iceberg Theory and Hall's Triad of Culture.

Trompenaars interprets culture in the form of a model which has the outer layer, the middle layer and the core. The outer layer is explicit and the most visible of the three concentric rings. Artefacts, products and the organization of institutions are included here. The middle layer is also explicit and it contains norms and values. At the heart of culture lies the core which is implicit and inaccessible. It consists of basic assumptions about life which are unconsciously handed down from generation to generation.

The second model of culture is Hofstede's Onion which has two main layers, practices and values. Symbols, heroes and rituals are visible and can therefore be grouped under practices, with symbols being situated at the first level of practices and rituals at the last one. Similarly to Trompenaars' Layers, in the Hofstede's model the core of culture is formed by values which are invisible.

The idea of visible and invisible in culture popularized by the anthropologists Hall and Kluckhohn is central to the Iceberg Theory. Further developed in 1995 by a team of American management consultants, Brake et al, the Iceberg Theory suggests that the most important elements of culture are cultural orientations, which lie beneath the surface of everyday communication. Katan (1999: 169) defines cultural orientation as "a culture's tendency towards a particular way of perceiving and modeling reality. The orientation or metaprogram influences how reality is modeled, i.e. which aspects are to be generalized, distorted and deleted". Considered to be the most comprehensive, the taxonomy of cultural orientations proposed by Brake et al distinguishes between ten orientations.<sup>1</sup> Section 2.3. focuses on cultural orientation towards communication with regard to Hall's Theory of contexting. In contrast to cultural orientations, which are the most significant parts of culture, visible elements of culture such as laws, customs, ways of dressing, food and drink, etc., are just the tip of the cultural iceberg.

The extension of the Iceberg Theory can be seen in terms of Hall's Triad of Culture, which differentiates between technical, formal and informal culture. Technical culture covers scientific communication. Being treated as an independent system in this case, language carries only one meaning which can be analyzed and taught by any expert in the field. The second level of the model, formal culture, consists of customs, rules, traditions, procedures, etc. Once learned and scientifically studied, those routines become technical patterns. Since this level of culture varies between formal and informal one, it is sometimes above and sometimes below the waterline. Lastly, the informal part of the triad of culture includes culturally or socially determined values which we respond to and identify with. The values are acquired out-of-awareness, which is why this third level remains invisible to us.

Just like the approaches to the study of culture, the models described in this section define culture at only one or some levels. In order to cover all levels at which culture operates, the theory of logical levels is put forward, which is the subject of the next section.

<sup>&</sup>lt;sup>1</sup> Orientations towards action, communication, environment, time, space, power, individualism, competitiveness, structure and thinking (Katan 1999: 171)

#### 1.3. Logical levels and culture

Robert Dilts, a co-founder of Neuro-Linguistic Programming, developed the theory of logical levels to explain how individual learning and communication function, but it can be applied to organization and culture as well. His theory is described here in terms of its relation to the concept of culture.

Dilts isolated five levels which are hierarchically ordered and interrelated. The basic level is the environment consisting of external factors which can be perceived through the senses, in time and space. So for instance we can group cultures according to climate (rainy Great Britain), dress (popularity of sneakers in the USA), temporal setting (the 60s culture), etc. The next logical level of culture is the behavior which is governed by socially accepted rules, often expressed in forms of proverbs and old wives' tales. Through this level individuals and organizations react and operate on the environment. The first level that frames the interpretation of environment or behavior is the level of capabilities, strategies and skills, all being part of the invisible cognitive environment. It primarily focuses on the way how a message is transmitted and perceived. The fourth logical level includes beliefs and values. Beliefs motivate or constrain people's action and they also embody values, which act together and orient people towards a particular pattern of behavior. Finally, at the highest level of the logical levels model stands identity. Being a member of culture basically means that it is necessary to share beliefs at every level of culture.

Of the theories of culture described in Part one, the theory of the logical levels model is the only one enabling the analysis of all aspects of culture. However, in practice some of the levels do not function according to this model. There are five points that need to be mentioned with regard to culture and behavior.

Even though in the logical levels model an emphasis is placed on beliefs and values as factors affecting behavior, there are other filters responsible for it as well, for example personal reasons. What this theory also fails to include is the fact that individuals are members of different cultures. This means that in the environment of a foreign culture individuals generally comply with the patterns of behavior set by that particular culture. Apart from being considered members of many cultures, individuals usually do not treat all cultural values as valid, but rather as being just congruent with that culture. Hofstede uses the term *ecological fallacy* to describe that phenomenon. Another important point relating to the logical levels model is the nature of culture. It allows for a certain deviation in behavior, which is on a cline from typical, through

atypical to unrecognizable. Lastly, in the logical levels model there may be an internal conflict of values and beliefs. In order for the model to function as a unified system within which all the approaches to culture can function, there should always be congruence between the levels.

In summary of Part one, it is important to stress that defining culture is a rather difficult task. The existence of various theories supports the fact that culture cannot be looked into from one perspective only. Being understood as a complex system, culture operates at different levels. What follows next is a detailed analysis of the connection between language and culture.

## 2. Interrelation between language and culture

House (Riccardi 2002: 96) claims that "language as the most important means of communicating, of transmitting information and providing human bonding has an extremely significant position inside any culture." She also suggests that there are two major views of language. According to the first view, language reflects the culture of a social group. In other words, society's public and cultural values, norms, traditions, etc. have a strong influence on members of a particular culture, which is most visible in language used by members of the same and different social groups.

Contrary to the view that language is reflexion of culture, there is also an idea of language as a source of cognitive and behavioral conditioning which suggests that language in its lexicon and structure has a direct impact on its speakers' thinking, worldview and behavior. Originated in the ninetieth century in German idealistic philosophy of Wilhelm von Humboldt, this idea of linguistic relativity was further developed by anthropologists Edward Sapir and Benjamin Lee Whorf in the first half of the twentieth century (see Section 2.2.).

They also influenced more recent view of language proposed by the Soviet semiotician Jurí Lotman. He distinguishes between primary and secondary modeling systems. Being understood as the primary modeling system, language cannot exist without the context of culture just in the same way as culture cannot exist without the structure of the natural language at its center. Since culture is expressed through language, "cultural products" such as literature and art can only be described as the secondary modeling systems. The following section introduces two kinds of contexts indispensable for a successful communication.

#### 2.1. Contexts of situation and culture

As Bronislaw Malinowski puts it (Katan 1999: 72), "...language is essentially rooted in the reality of culture...it cannot be explained without constant reference to these broader contexts of verbal utterance." Being among the first anthropologists to have realized the inextricable connection between language and culture, Malinowski stresses the importance of the context of situation and the context of culture in understanding the meaning of language. Moreover, those two contexts have to be implicitly or explicitly clear to the interlocutors and hearers in order for communication to take place. With regard to meaning, Malinowski makes the distinction between semantic or idealized meaning and culture-bound meaning, the latter being the main object of his study.

The notion of context in the field of linguistics began to receive more attention in 1933 when Leonard Bloomfield published *Language*.<sup>2</sup> Focusing on a dynamic relationship between language, culture and thought as well as on the social background in communication, he claims that meaning depends on "the situation in which the speaker utters it and the response which it calls forth in the hearer" (Katan 1999: 73). In his definition of meaning, however, Bloomfield does not mention culture and its influence on the act of speech. Indeed, the concept of a cultural framework was not thoroughly studied until thirty years later when Dell Hymes examined the effect of cultural values and beliefs on the process of communication. In 1989 Halliday took up Malinowski's concept of context of situation and culture and proposed his definition of context as being "non-verbal environment of a text which is made up of the context of situation and the wider context of culture" (Katan 1999: 177). He also suggests that the context of situation is "the total environment in which a text unfolds" (Katan 1999: 177). Unlike Malinowski, Halliday in his theory questions the existence of the context of culture as a separate linguistic model. What he points out is that some indication of the cultural background is definitely helpful in describing the context of situation.

<sup>&</sup>lt;sup>2</sup> Textbook in which Bloomfield argues that linguistics needs to be an objective discipline. He rejects the classical view that the structure of language reflects the structure of thought and makes a spoken language the only object of his study (http://www.newworldencyclopedia.org/entry/Leonard\_Bloomfield#Language, 2 April 2008).

When discussing about the role of culture in language, it is necessary to include the theories put forward by Edward Sapir and Benjamin Lee Whorf. The following section touches upon that matter.

## 2.2. The Sapir-Whorf Hypothesis

Both Malinowski and Sapir believed that language could only be understood with the reference to the context of culture. Sapir, however, went further with his concept of language suggesting that "no two languages are ever sufficiently similar to be considered as representing the same social reality. The worlds in which different societies live are distinct worlds, not merely the same world with different labels attached" (Bassnett 1991: 22). This extract forms part of the Sapir-Whorf Hypothesis, which can be analyzed in view of different versions and different approaches.

There are two versions of the Sapir-Whorf Hypothesis, the strong and the weak one. According to the strong version, language determines the way speakers think. Since this idea implies that we can only think what our native language permits, it is considered absurd and has few supporters today. The weak version, on the other hand, suggests that language has an influence on thought, but it is not the determining factor. Grammar is particularly important, as it "makes meaning possible and also sets limits on what can be meant" (Katan 1999: 74). This version has definitely more supporters in the fields of anthropology, linguistics and translation.

In addition to two versions of the Sapir-Whorf Hypothesis, there are also different approaches to it based on the theorists' different understanding of language. The approaches include the lexical and the grammatical one. The lexical approach is supported by Sapir who claims that language as a guide to social reality labels lexis, which represents a different reality rather than simply a different label. Maps of the world for the lexis are therefore culture specific. In contrast to Sapir, who strongly believed that the interface between language and culture was in the lexis, Whorf argued that this connection was more visible in the grammatical patterns. Focusing on language as a system, Whorf in his grammatical approach put forward the idea that different language systems represent different cultural realities.

What can be concluded from the Sapir-Whorf Hypothesis is that there surely exists interplay between language and culture. Lexis and language system reflect different realities. Even though concepts between cultures differ, this does not mean that they cannot be understood by members of other cultures. Language can convey meaning of concepts from different realities, but the way how it is done as well as individual's perception of such concepts is culture-bound. The next section discusses the importance of Hall's Theory of contexting with regard to the context of culture.

## 2.3. Hall's Theory of contexting in communication

Considered to be one of the guiding orientations in communication, contexting implies that individuals, groups and cultures differ regarding the quantity of information that needs to be made explicit in order for communication to function. In Hall's theory of contexting in communication, text and context have special meaning. Text is "transmitted information", whilst context is "the amount of information the other person can be expected to possess on a given subject" (Katan 1999: 177). The context is to be understood as both the context of situation and the context of culture.

The two aspects of communication, text and context are represented by Hall's Triangles. At one extreme, in the text triangle, all the information is made explicit, whereas at the other extreme, in the context triangle, no text is necessary since all the information is implicit. According to Hall, "contexting is a fundamental aspect of culture and members of a culture have a shared bias, either towards communication through the text or the context" (Katan 1999: 179). Cultures can therefore be positioned on a cline from high context communication cultures (HCC cultures) to low context communication cultures (LCC cultures). With priority given to implicit information, the highest context communication culture is Japanese, whereas the lowest context communication culture preferring precision and detailed information is Swiss-German.

In conclusion to Part two, it can once again be emphasized that "language is embedded in culture, linguistic acts take place in a context and texts are created in a continuum, not in vacuum" (Bassnett 2007: 23). Having described the link between language and culture, and the importance of context, we now turn to the field of cross-cultural translation.

#### **3.** Cross-cultural translation

According to Lieven D'hulst (2008: 221):

Cross-cultural translation is commonly interpreted in a growing number of disciplines dealing with translation (postcolonial translation studies, cultural studies, cultural anthropology, sociology and some more) as a mode of translation that puts special emphasis on a number of verbal and non-verbal aspects of communication between more or less remote cultures.

Covering all processes of mediation between different cultures, cross-cultural translation is considered to be one of the key concepts in cultural discourse worldwide. Since every text, either spoken or written, is the result of both linguistic and extra-linguistic reality, translation has to be understood as the process of conveying messages within linguistic and cultural contexts. Ivir (2002/2003: 124) emphasizes that "an act of translation is an eminently cultural act: it takes place within culture; it has a direct bearing on culture, and it helps to shape culture." Despite the fact that translating involves not just two languages, but also a transfer from one culture to another, translation studies scholars have for a long time failed to recognize the importance of the framework of culture for the theory and practice of translation. The following section discusses the cultural turn and the inclusion of the context in the process of translation.

#### 3.1. Cultural turn in translation studies

Since culturally oriented approaches gained a considerable importance during the late 1980s and early 1990s, the cultural turn can be seen as a massive phenomenon that was taking place in a wide variety of disciplines. Following the general trend in the humanities and social sciences, translation studies moved towards the analysis of translation from a cultural studies perspective. Explaining why translation studies took a cultural turn, Bassnett and Lefevere point to the fact that "the questions about translation have been changed and that the object of study has been redefined; what is studied is text embedded within its network of both source and target cultural signs" (1990: 11-12). Most translation scholars agree that the shift in translation studies was marked by

publication of Bassnett and Lefevere's collection of essays *Translation*, *History and Culture* in 1990.

Earlier evidence of the cultural turn in translation studies can be found in the late 1980s. Belgian scholars José Lambert, Theo Hermans and Hendrik van Gorp examined the influence of linguistic as well as extra-linguistic factors on the process of translation. Considered to have prepared the ground for a cultural turn, the polysystem theory put forward by Israeli Itamar Even-Zohar suggests that any model of a literary system should include translated literature because translations can initiate change and innovation. With regard to the status of translations, Even-Zohar claims that "translations cannot be categorized as either primary or secondary, but are always variable, depending upon the specific cultural situation of the receiving culture" (Gentzler 2004: 166). A further example of the cultural turn in translation studies is the introduction of behavioral patterns that govern translation strategies and techniques. By using preliminary, initial and operational norms<sup>3</sup>, Gideon Toury believes it is easier to detect and describe literary, linguistic and sociological factors influencing translation. Functionalist approach is also an indicative of the cultural turn in translation studies. Advocates of this approach, Hans Vermeer, Katharina Reiß, Christiane Nord, Mary Snell-Hornby and Justa Holz-Mänttäri, argue that the function of translation determines the translation strategies.

Looking at the translation studies in the 1980s and 1990s, it can be concluded that theoretical developments were mostly shaped by the shift from source-oriented theories to target-oriented theories and the shift to include both linguistic and cultural factors in the translation procedure. The next section deals with culture-bound items and cultural gaps.

<sup>&</sup>lt;sup>3</sup> Preliminary norms involve factors determining which texts are selected for translation; initial norms influence whether a translator remains loyal to the source text or not; operational norms influence translators' decisions during the process of translation (Gentzler 2004: 167).

#### 3.2. Culture-bound items and cultural gaps

Culture-bound items are "words and phrases that denote or connote cultural specifics or that carry cultural markers" (Frank 2004: 802). Since cultures differ among themselves, in the process of translation it is common to find source culture elements which do not exist or are different in the target culture, and for which there are no adequate target language equivalents. Linking those translation problems with the existence of unmatched elements in the target culture, Pavlović and Poslek (1998: 159-164) analyze areas of source culture specifics and group them into several categories. The categories include the following: ecology<sup>4</sup>, everyday life, material culture, history, religion, economy, political and administrative functions and institutions, the armed forces, education, forms of address, gestures and habits, work, leisure and entertainment, television.

In view of the importance for the topic of this paper, only three of these categories are briefly described. Being one of the most comprehensive categories, the category of everyday life covers types of dwellings, household appliances, food, meals<sup>5</sup>, clothes, including parts of national costumes, means of transport, public services, especially the names of public service companies. The next category is material culture, which comprises different products, particularly trademarks. If a product becomes well-known in the target culture, trademarks are simply transferred in the process of translation; otherwise a generic noun must be used instead of the name of a product. The last category of importance here is television. As an important factor in bringing together distant cultures, it is an endless source of culture-bound items and includes names of TV personalities, hosts, game shows, etc.

Due to the fact that different cultures divide up universe in different ways and create a whole series of words to designate their special language, some translation scholars argue that certain concepts simply cannot be translated. This takes us to the concept of cultural gaps. The French for instance have numerous words for various types of wines and

<sup>&</sup>lt;sup>4</sup> Different aspects of nature, geographical concepts, flora and fauna (Pavlović and Poslek 1998: 160)

<sup>&</sup>lt;sup>5</sup> *Ručak* can be either *lunch* or *dinner*, *večera* can be either *dinner* or *supper*, *dinner* can be *ručak* or *večera* (Pavlović and Poslek 1998: 160).

cheeses, Spaniards for bull-fighting, Arabs for camels, Eskimos for snow, the Chinese for rice, etc. Dealing with the issue of gaps in the process of translation, Catford suggests that there are two types of *untranslatability*, linguistic and cultural. On the linguistic level, *untranslatability* occurs when there is no lexical or syntactical substitute in the target language for a source language item. Cultural *untranslatability*, on the other hand, is "due to the absence in the target language culture of a relevant situational feature for the source language text" (Bassnett 1991: 39). Similarly to Catford, Popovič also distinguishes two types of *untranslatability*. The first type is based upon Catford's category of linguistic *untranslatability*, while the second type involves difficulties that go beyond the purely linguistic. The two linguists have different approaches to the second category. While Catford starts from within linguistics, Popovič starts from a theory of literary communication and describes the second type as "a situation where the relation of expressing the meaning, i.e. the relation between the creative subject and its linguistic expression in the original does not find an adequate linguistic expression in the translation" (Bassnett 1991: 42).

However, according to Nolan (2005: 58), "untranslatability is quite often a misnomer, because an exact or complete translation is not necessary, and an approximate equivalent may be all that is needed in a given context." At the very beginning of the process of translation, translators have to be aware of the fact that the same idea may be expressed differently from one culture to another. In order to solve the case of untranslatability, Nolan suggests different strategies, such as looking for an equivalent register, or level of language, use of other parts of speech, or figures of speech, etc. Criticizing the whole notion of untranslatability, Georges Mounin (Bassnett 1991: 44) points out that translation can be achieved with relative success:

...But as it involves the consideration of language in its entirety, together with its most subjective messages, through an examination of common situations and a multiplication of contacts that need clarifying, then there is no doubt that communication through translation can never be completely finished, which also demonstrates that it is never wholly impossible either.

With regard to the difficulties in translation, Levý argues that "the translator has the responsibility of finding a solution to the most daunting of problems" (Bassnett 1991: 31).

The next section deals with the strategies of translating culture-bound items as well as with the factors influencing the choice of the translation procedure.

## 3.3. Strategies of translating culture-bound items

Ivir (2002/2003: 117) claims that " the translating of unmatched elements of culture poses two problems for translation theory and practice: (1) that of possible procedures available to the translator in dealing with a particular element of culture, and (2) that of strategy, or the choice of the procedures best suited for a particular act of communication".

The first problem can easier be solved since a list of possible procedures and their combinations enables a successful transfer of information. In this paper the translating of unmatched elements of culture is analyzed in view of Newmark's translation strategies, (see Part 4).

The second problem, however, is more difficult as it involves various factors which influence the translator's choice of the procedure. Among the most important factors that guide the translator in selecting the strategy is the communicative function of unmatched elements of culture. The role of the translator is to recognize and properly interpret the communicative function of such elements in the source language. The next factor that determines the choice of the translation procedure is the position of an unmatched element in the source culture and its possible counterpart in the target culture. The understanding of the value of such an element orients the translator towards the choice of a suitable procedure. Contrastive relations between the source and the target language govern the translator's choice of the procedure as well. Since some of the procedures are blocked and others are favored for semantic or syntactic reasons, the translator's choice of strategies is limited. What also influences the translator's choice of the procedures is the translating tradition of the target culture. Some languages for instance prefer domestic equivalents over foreign importations. In contrast to the factors discussed above, this factor is to be understood as a general trend and does not influence the translator's choice in each case.

Ivir emphasizes that all these factors are just part of a larger whole - "the translator's ability to communicate with the intention of achieving cultural mediation" (2002/2003: 123). The idea of a translator as a cultural mediator dates back to 1975 when George Steiner pointed out "that the translator is a bilingual mediating agent between monolingual communication participants in two different language communities" (Katan 1999: 12). Apart from being bilingual, the translator must be bicultural as well and possess the following competencies in both source and target culture: knowledge about society, communication skills, technical skills and social skills.

Cross-cultural translation is a key practice in bridging the gap between two cultures. Since texts are determined by the cultural, historical and social background, in the process of translation it is necessary to refer to the context as well. With various translation procedures available, it is argued that culture-bound items can be successfully translated in the target language. We will now look at Part 4 which examines more closely screen translation and strategies employed in transmitting culture-bound items from English into Croatian.

#### 4. Screen translation

Following enormous changes in the field of translation studies over the last two decades, screen translation emerged as a relatively new area, being relevant to cross-cultural, multimedia and communication studies as well. The term *screen translation* covers subtitling and lip-synchs dubbing of audiovisual material for television and cinema as well as the translation of television programmes, films, videos, CD-ROMs, DVDs, operas and plays. It can also be referred to as *media translation, language versioning* and *audiovisual translation*.

Subtitling is the process of rendering the voice track in a written form. Low costs of subtitling as well as a brief period of time needed for the process make this form of screen translation more popular than dubbing. In addition to those advantages, subtitling leaves the original soundtrack intact, hence promoting foreign language and culture through different kinds of audiovisual materials. Due to the fact that subtitling can be evaluated by

those who know the source language of the voice track, it is considered to be a constrained form of translation. Time and space limit also affect the production and transmission of subtitles.

With regard to factors influencing the choice of screen translation method, it should first of all be noted that larger and wealthier countries tend to dub, whereas smaller ones choose subtitling. Other factors include new trends, available time, programme genre, the status of the source and target languages as well as target audience profile, such as age, sex, educational background and social class.

The following sections deal with the analysis of translation strategies in view of the corpus of the culture-bound items from the television series *Gilmore Girls*.

#### 4.1. Strategies of translating culture-bound items in Gilmore Girls

In this part the culture-bound items are grouped into eight sections according to the translation strategy employed. In each section there is a table with an English culture-bound item, a Croatian translation and an explanation of a cultural reference. As already mentioned in Section 3.3., Newmark's translation strategies are used for the analysis of the examples in this corpus. These include the following: transference, naturalization, cultural equivalent, functional equivalent, descriptive equivalent, componential analysis, through-translation and shifts or transpositions.

The corpus consists of 170 examples chosen from 32 episodes of the American comedydrama series *Gilmore Girls*<sup>6</sup>, mostly from seasons four and six. Known for its fast-paced dialogues filled with cultural references, the series *Gilmore Girls* centers on the relationship between a single mother Lorelai (Lauren Graham) and her teen daughter Rory (Alexis Bledel) living in the fictional town of Stars Hollow, Connecticut. Being

<sup>&</sup>lt;sup>6</sup> The series was created by Amy Sherman-Palladino, an American television writer, director, and producer (http://en.wikipedia.org/wiki/Amy\_Sherman-Palladino, 25 October 2011).

extremely popular in the United States, the series saw the creation of *Gilmore-ism.com*<sup>7</sup>, a fan-site with a comprehensive overview of the *Gilmore Girls* witticisms.

The practical part begins with the analysis of transference, followed by the rest of Newmark's translation strategies.

## 4.1.1. Translation by transference

The process of transferring a source language word to a target language text involves transliteration. This strategy is the most frequently used and with 84 examples it makes up 48% of the total corpus. As can be concluded from the table below, the transferred culture-bound items mainly refer to the American public figures, actors, singers, companies and organizations, sports and registered trademarks. There are, however, references to other cultures as well, with most of them belonging to the category of food (see Section 3.2.). Since this translation strategy is a source language oriented, the understanding of the reference in a given context largely depends on recipients' general knowledge of world cultures.

| ENGLISH CULTURE-                       | CROATIAN                            | EXPLANATION                        |

## 4.1.2. Translation by naturalization

Translation by naturalization is the process of adapting a source language word first to the normal pronunciation, then to the normal morphology of the target language. Contrary to the strategy of transference, this translation procedure includes transcription. With eight examples, it makes up 5% of the total corpus. Looking at examples 4 and 5, it is obvious that the translator made a mistake by using naturalization to translate "Hockettes" and "Rockettes". "Hokete" and "rokete" have absolutely no meaning in Croatian. Since both cultural elements are proper nouns, the translation strategy of transference is the only acceptable choice in this case.

| ENGLISH CULTURE-                     | CROATIAN                             | EXPLANATION  |

| than I had hoped.                    |                                      | who formalized the teachings                           |
|                                      |                                      | of earlier Swiss founders.                             |

Translation by cultural equivalent involves the replacement of a cultural word in the source language with a corresponding cultural equivalent in the target language. Even though they are referred to as equivalents, the two cultural words "are not accurate" (Čačija 2008: 109). Constituting only 2% of the corpus, this strategy is rarely used in translating culture-bound items.

The first two examples belong to the category of political and administrative functions and institutions (see Section 3.2.). In English it is possible to use acronyms in this case, whereas in Croatian full names of the cultural references must be provided, the exception being the second example where the name of the institution is shortened probably due to the space limit (the full name of the institution is *Fond za zaštitu okoliša i energetsku učinkovitost*). Broadly speaking, the two culture-bound items in English and Croatian can be regarded as equivalents, but still they differ in view of the organization, scope of functions they cover, etc. With regard to example 3, *Goli kuhar* cannot be considered a Croatian culture-bound item since it is a literal translation of the English cultural word *The Naked Chef*<sup>8</sup>. However, Croatian recipients are already familiar with the term *Goli kuhar* and it can therefore in this case be used as a cultural equivalent to *Bobby Flay*.

<sup>&</sup>lt;sup>8</sup> Nickname of James "Jamie" Trevor Oliver, an English chef, restaurateur and media personality, known for his food-focused television shows (http://en.wikipedia.org/wiki/Jamie\_Oliver, 14 November 2011).

#### 4.1.4. Translation by functional equivalent

In contrast to the previously described translation strategy, the translation by functional equivalent requires the use of a culture-neutral word in the target language. With 22 examples, it accounts for 13% of the total corpus. From the examples below it can be concluded that this procedure is primarily used when translating registered trademarks. Considered to be unknown to a vast majority of Croatian recipients, such cultural references are therefore replaced with a generic noun. Other culture-bound items that have functional equivalents in the target culture refer to education (see example 4), idiomatic expressions (see example 5), economy (see example 14), and food (see example 13).

With regard to example 6, the translator could have used the translation strategy of transference as well, slightly adapting the term to the Croatian language by using the ending *-ice*. Another possible translation of the cultural reference *Speedos* then would be *speedosice*. Since it is used colloquially and treated as a common noun in Croatian, the term is written with a small letter. In examples 8 and 9 we have the case of established translations that can be found in dictionaries. Even though they function as neutral equivalents, *lizalica* or *lizaljka* and *čičak* are the only acceptable translations of the English culture-bound items *Popsicle* and *Velcro*. Being frequently used in English as a generic term for hook-and-loop fasteners, *Velcro* has gradually lost its meaning of a trademark. Instead of translating *Sunnyside Home* (see example 10) as *starački dom*, which sounds a bit harsh, the translator should have used the term *dom za starije*. Using the translation strategy of transference would even be a better choice in this case since *Sunnyside Home* is the name of the institution.

| 21. I made reservations at this<br>crappy Italian restaurant with<br><b>Chianti</b> bottles hanging from<br>the ceiling | Rezervirao sam stol u<br>talijanskom resoranu u kojem<br>boce <b>vina</b> vise sa stropa               | Red Italian wine produced in Tuscany.   |
| 22. I cannot for the life of me<br>remember the last time I<br>bought <b>Certs</b> .                                    | Ne mogu se sjetiti kad sam<br>zadnji put kupila <b>mentol</b><br><b>bombone</b> .                      | Breathe mint manufactured<br>by confectionery company<br>Cadbury Adams.   |

In the process of translation by descriptive equivalent the meaning of a source culturebound item is explained in several words in the target language culture. With five examples, this procedure makes up 3% of the total corpus and it is one of the most rarely used translation strategies.

## 4.1.6. Translation by componential analysis

In Newmark's words (Čačija 2008: 109), "translation by componential analysis is the process of comparing a source language word with a target language one which has a similar meaning but is not an obvious one-to-one equivalent, by demonstrating first their common and then their differing sense components." Also called chunking down, this translation strategy involves the move from the general to the specific, resulting in translations being unrecognized as culture-bound items. Translators can also chunk down to the micro level by looking at the constituent elements of a word. With 31 examples, translation by componential analysis is the second most frequently used strategy in

translating culture-bound items and it makes up 18% of the total corpus. The majority of the below listed cultural elements belong to the category of television (see Section 3.2.).

On the whole, the English culture-bound items are adequately matched with the cultureneutral elements in Croatian which have certain similarities with the English ones. In Croatian this similarity is expressed either by means of a short expression or a description in a few words (compare examples 3 and 7).

Some of the suggested Croatian translations, however, seem to have nothing in common with the English cultural elements (see for instance examples 2, 4 and 15). In examples 2 and 15 the culture-bound items are used metaphorically and the translator allowed himself a great freedom in search for the equivalents in Croatian. The English cultural element Cujo (see example 2) should have either been transferred or translated as ljutica. Since human (Lorelai) is identified with Cujo (a rabid dog), ljutica (an angry woman) would fit better in the given context than *vučica*. With regard to example 15, the Croatian translation puževa kućica can be viewed as a corresponding equivalent to the English culture-bound item Tom Thumb. Even though the denotative meaning of the elements is different, they both invoke the reference of "smallness". It follows that the English and Croatian recipients have the same associations upon reading the sentences in which those elements are used. Through-translation (Tomov palac), on the other hand, would not have achieved that effect. Looking at the explanation of example 4, it is clearly that the English culturebound item Etch-A-Sketch has no other common grounds with the Croatian translation pišibriši ploča except serving the purpose of writing and drawing. Having the same function as the English cultural element, piši-briši ploča can therefore be considered an acceptable choice in this context.

| ENGLISH CULTURE-                 | CROATIAN                     | EXPLANATION                   |

#### 4.1.7. Through-translation

According to Newmark (Čačija 2008: 109), "through-translation is the literal translation of common collocations, names of organizations and components of compounds. It can also be called calque or loan translation". When using this translation strategy, translators take literal meaning of words out of context, fully respecting target language grammar. The English culture-bound items translated literally belong to the category of food and television (see Section 3.2.). With 12 examples, this translation strategy makes up 7% of the corpus.

Regarding example 2, a better choice would be to use the cultural element in singular, making other necessary changes (a possible solution then would be *popijmo pokoji Bijeli Rus*). Noun in plural invokes the reference to people (Russians). In example 4 the first letter of the cultural element *bosonoga kontesa* should be capitalized, since it is the reference to the celebrity chef. Similar changes have to be made in example 5 as well. *Mjesec od papira* is the name of the movie, therefore the first letter should be capitalized and the whole culture-bound item put in italics. In examples 9 and 10, we have a case of Croatian translations modeled on the foreign words which have become a part of the English vocabulary. The word soufflé (see example 8) is the past participle of the French verb *souffler* which means "to blow up" or "to puff up", hence in Croatian *nabujak*. The culture-bound item *wiener* (see example 9) can be translated into "pure English" as *vienna sausage*, which again serves as a model for the Croatian translation *bečka kobasica*. In example 12 the translation strategy of transference should have been used, since the culture-bound item *Coffee Bean & Tea Leaf* is the proper name of the coffee chain.

| ENGLISH CULTURE-                   | CROATIAN                          | EXPLANATION                   |

## 4.1.8. Shifts or transpositions

"Shifts or transpositions involve a change in the grammar from source language to target language, for instance, (i) change from singular to plural, (ii) change required when a specific source language structure does not exist in the target language, (iii) change of a source language verb to a target language word, change of a source language noun group to a target language noun and so forth" (Čačija 2008: 109). With six examples, shift makes up 4% of the total corpus. The culture-bound items in examples 1 and 2 are translated by shift because they cannot be used as abbreviations in Croatian. In examples 3, 4, 5 and 6 verbs carry the meaning of the culture-bound items. Again, in Croatian there are no such structures and therefore it is necessary to employ shift.

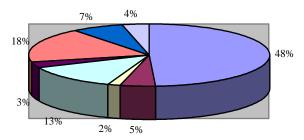

| ENGLISH CULTURE-                  | CROATIAN                          | EXPLANATION                    |

| Pierced me.                       |                                   | ungrateful.                    |

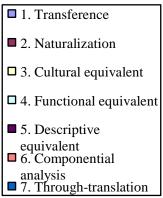

Apart from eight strategies of translating culture-bound items analyzed in Part 4, Newmark (Čačija 2008: 109-110) proposes several others as well. These are synonymy, modulation, recognized translation, compensation, paraphrase, couplets and notes. However, none of the above mentioned procedures was used in translating the examples from this corpus. As Figure 1 illustrates, the dominant strategy of translating culture-bound items in *Gilmore Girls* is transference, followed by componential analysis, functional equivalent, through-translation, naturalization, shift, descriptive equivalent and cultural equivalent.

Regarding the Croatian translations in general, it can be said that the translator was at times inconsistent; some of the registered trademarks were transferred, whereas others were replaced by functional or descriptive equivalent, compare for example the translations of *Gatorade* and *Capri Sun* in Sections 4.1. and 4.4. Inconsistency can also be found in translations of American public figures. In some cases the names were transferred, while others were translated by componential analysis, see for instance the translations of *Jason Blair* in Section 4.1. and *Valerie Plame* in Section 4.6.

Figure 1: Newmark's strategies of translating culture-bound items in Gilmore Girls

#### 5. Conclusion

As it is highlighted in this paper, translation is vital to the interaction between cultures. Despite the fact that cultures share some general practices, for instance cooking, music, religion, etc., the expression of these cultural universals may vary widely from culture to culture, thus resulting in great diversity among world cultures. Since every culture has its own unique character and language as its integral component is culturally marked, it follows that the meaning of concepts found in one culture cannot be understood by people from other cultural backgrounds. In order to bridge the existing gaps between cultures, it is necessary to employ translation, which presupposes cultural literacy and knowledge of the relation between an expression and the cultural situation in which it is used. However, full translation equivalence between a source and target culture can never be achieved, which results in a certain degree of gain or loss in the meaning. Strategies of translating cultural specifics listed in the practical part of this paper prove useful in rendering the message of the reference implied, whilst in some cases cultural features get lost in the process. A great number of culture-bound items found in the television series *Gilmore Girls* point to the fact that culture is widespread in the media and that we should all be aware of it in any form of communication.
